

Instruction of Disassemble & Reassemble the Clock

Step 1: We can see there are 6 pieces metal thread spring from the back side. Please press from one side of the metal spring to take all 6 spring out.

Step 2: Unscrew the **GOLD CAP NUT** (CCW/counterclockwise direction) by our fingers or a pair of pliers. Carefully remove the minute hand and hour hand by lifting and wriggling the clock hand's round metal area near shaft. Now we take off the nut and hands.

Step 3: Aligning to 12 O'clock, insert hour hand into shaft (slightly press the middle to fit the shaft), then insert minute hand and screw nut cap back. Keep both hands parallel and turn two full cycles to ensure the hands are not touching each other.

Tips: Hour hand should be pressed tightly, but minute hand is loose before we screwing the Cap Nut;

Step 4: Put AA batteries to test hands and gears before assembling. Put the 6 metal spring into the back of the frame and assembling completed.

Thanks so much for reading this instruction.
