Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1 times higher than 1 kg of CO 2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

Cooling Mode	
Seasonal Energy Efficiency Ratio (SEER)	2,6
Energy Efficiency Class	A
Annual Electricity Consumption	Energy consumption 1 kWh per year, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.
Design Load	2,6 kW
