Cool-i THERAPEUTIC PRINCIPLE OF RED AND BLUE LIGHT THERAPY

THE ROLE OF LED SEMICONDUCTORS

Red Light Function.

Red light promotes collagen regeneration, enhances cellular metabolism and promotes overall fibre health.

Blue light function.

Blue light has antibacterial and antiseptic effects, helps skin rejuvenation and improves pigmentation and other conditions.

630NM RED LIGHT AND 465NM BLUE LIGHT

Can penetrate the skin's elastic fibres and improve blood flow in the skin. Provides oxygen and nutrients to the skin and repairs damaged elastic fibres. Increases muscle elasticity for a firming effect.

Enhance Bladder Control

Eases muscle tension

Better Back and Hip Support

Incontinence relief

Postpartum Recovery

Enhance Pelvic Health during Menopause

Cool-i Gear Introduction

- ON/OFF
- Mode
- Function Switch
- Time Display
- Electrode plate
- Silicone nib

THERMAL ENERGY
Gentle heat warms the tissue and encourages blood flow, which aids in natural lubrication to help soothe dryness. Gentle heat also amplifies the LED benefits.

Pulse Function
Long-term use of Pulse Function helps to modify the structure and function of the tissues to repair and restore the pelvic floor muscles.
