1. straight tube
2. suckers
3. hammock cover
4. long elbow
5. fixing foot
6. screws
7. protection plug
8. suction cup nuts
9. wrench assembly

• Installation

3 Insert the elbow into the cloth sleeve in the position as shown and insert the screw into the alignment hole position of the fixed pin respectively.

5 Insert the straight tube into the cloth sleeve and hold it in the hole position.

2 Tighten the screws with the allen key separately

4 Insert the nut into the corresponding hole and tighten by turning the suction cup.

6 Clean the suction cup and glass with alcohol and dry with paper to avoid leaving residue.

7 When placing the hammock, apply force to the suction cups so that they adhere firmly and release the air inside. Check that it is secured before use.

• Tips and solutions

Put the suction cups in a container with hot water (80°C or higher) for about 2-3 minutes and then let them dry and cool on a flat surface.

It is not a necessary process under normal conditions but it may happen that during the manufacturing, packaging or shipping process, the suction cups may bend. A solution to maximize safety and smooth operation is to follow the process indicated in the images. By receiving heat and allowing it to cool, they recover their optimal state.
