(EN) English

Multi-language dictionary, see Table 3.

1. **Refer to Table 1 and Table 2 for product parameters.**
2. **Operating instructions as below:**

2.1 Remove the insulating film, see Figure 1.

2.2 Reveal the type-c charging port, see Figure 2-1.

2.3 Charging, see Figure 2-2.

2.4 ON/OFF, see Figure 3.

Single press the side switch to turn the light on/off. When the light is off, press and hold the side switch for 2 seconds to activate the Lockout mode. Blue light was turned off. Only the moonlight, low, medium, and high mode can be memorized when the light is switched off. The memory function is memorized by default. The light will only be memorized for one minute before resetting to medium mode. To disable the memory function:

2.5 Lockout / unlock, see Figure 4.

When the light is off, press and hold the side switch (for about 2 seconds) until the light blinks red twice, then turn the side switch to the moonlight mode first and then switch off to cancel the lockout mode. The indicator will blink red 3 times after the unit is on for a short time to signal that the light is still in lockout mode. To unlock the light, repeat the above steps. The light will turn on in moonlight mode by default.

2.6 Moonlight, see Figure 5.

When the light is off, press and hold the side switch for over one second to access the moonlight mode. When the flashlight is on, press and hold the side switch to switch between moonlight and other modes.

2.7 Turbo, see Figure 6.

Double-click press the side switch to enter into turbo. Double press again to return. If the memorized mode were High or Medium, the flashlight would switch to Turbo momentarily and then return to High or Moonlight. The output is then memorized.

2.8 Change brightness level, see Figure 7.

When the flashlight is on, press and hold the side switch and it will change the brightness level in the order of high, medium, low, turbo, high, medium, low, turbo, and so forth. The mode is selected when the side switch has been released. (Please note: moonlight and turbo are not in the brightness cycle.)

2.9 Strobe, see Figure 8.

When the flashlight is on, triple-press the side switch to activate strobe mode. To quit this mode, single press or press and hold the side switch.

2.10 Set timer, see Figure 9.

The flashlight has a long (5 minutes) and short (3 minutes) timer. Turn the light (except for moonlight) on manually to activate the timer.

To activate a timer: Press Replacement Bolt/Tailcap Boot/Tailcap to remove tailcap.
